

# QUALITY

## ISO 9001-2008:

ISO 9001:2008 is the fourth edition of the standard since it was first published in 1987. Today it is the global benchmark for quality processes in a manufacturing environment. Our company is continually audited for compliance to the standard, which touches every department in our organization. On an ongoing basis, we are required to demonstrate that our quality processes and control systems are designed to consistently produce the highest quality product each and every time.

**A**

### TRI-FUSION SHELL

Acrylic, a vinyl ester vapor barrier and resin composite are layered together, making the spa shell the strongest in the industry.

**B**

### FULL FOAM INSULATION

A light density polyurethane foam insulation that completely surrounds the shell and fills the spa cabinet. This simple, yet proven technology greatly reduces heating costs, noise and vibration. Ensuring the best spa experience possible.

**C**

### ENERGY SAVING HEATER

The energy-conserving heating element allows water to pass over the heater slowly, increasing the efficient transfer of heat to water, and reducing mineral buildup.

**D**

### PROPOLYMER FOUNDATION

This sturdy ABS base offers premium structural support, sealing out cold and moisture while protecting against insects and rodents. The no maintenance base will ensure your new Jacuzzi will keep its elegant appearance over time.

### PROENDURE CABINETRY

This synthetic wood cabinetry is durable and UV-resistant.
